

Instructions to embed the Autoclick Credit App In a Web Page Using an Iframe 7/31/2022

The Autoclick secure credit app can be embedded into any web page in your web site using the standard html iframe element. However, this can present some practical issues when it comes to the differences of the height of the credit app form when viewed on a PC verses a mobile device. If your webmaster specifies the height of the iframe for the desktop screen it will be improperly sized for the mobile screen, and vice versa.

To address this problem please include the following script in the head section of the page that contains the iframe for the credit app. This script will automatically resize the height of the iframe depending on the content.

```
<script type="text/javascript" src="https://www.accreditapp.com/scripts/cawparent.js"></script>
```

The iframe should be formatted as follows:

```
<iframe id='myiframe' style="width:100%; height:630px;" src=' [credit application URL]'  
frameborder='0' ></iframe>
```

IMPORTANT: Replace [\[credit application URL\]](#) with your credit app URL that was emailed to you in your welcome email.

After substituting your dealerships credit app link URL, your iframe tag should look similar to this:

***** Below is an example of what the iframe code will look like – do not copy! *****

```
<iframe id='myiframe' style="width:100%; height:630px;"  
src=' https://www.accreditapp.com/ACCreditApp.aspx?ACCFX=12345o1234' frameborder='0' ></iframe>
```

NOTE: The iframe must have the id of 'myiframe' for the script to function properly.

IMPORTANT: The credit app URL and the URL in the script reference above should both contain 'www'.
